## THE CAMELEON INTER-ROW CLEANER

Lyckegård presents a 12 meter inter-row cleaner to show greater capacity and the availability of our new inter-row cleaners (6-12 m) that are built on the same reliable, exact and precise system as the other machines in the Cameleon family.

The Cameleon IRC can be used in any kind of crop, in several row distances and presents high performance with our special sturdy carriers with zero sideway movements.

- ✓ Obtain the accuracy of the Cameleon system from our new inter-row cleaner
- ✓ Precise row following by camera or GPS on the tractor
- ✓ High capacity - low HP requirement

# Cameleon IRC

## PRECISION

Just like the Cameleon Seeder, the inter-row cleaner has a parallel side dislocation system that are managed by a camera system. It can also be equipped with steerable rear wheels. Those are managed by a camera system or GPS repiter on the tractor for higher precision.

## FLEXIBILITY

The IRC comes in working widths of 6, 8, 9 and 12 m and with several possible row distances, adjustable to 250, 321, 333, 500 and 750 mm. There is also a wide range of shares in differents shapes, widths and for different crops and occasions for the machine to adapt to the farmers needs.

## STABILITY

The Cameleon fram and carriers are unique and provide an extreme stability capable of maintaining the accuracy required for exact hoeing while providing individual ground ride for each carrier. A traditional row cleaner is often equipped with more unstable S-tines which tend to bend backwards or sideways which leads to lower precision and a risk to damage the crop.

The HP requirement is low - only 120 HP is needed for the 12m IRC.

## CAPACITY

Lyckegård wants to have machines for the entire crop rotation. Our multi machine, the Cameleon combined seeder and hoeing machine, has been a success and we now want to give farmers the opportunity to purchase an inter-row cleaner with the same precision as our Cameleon seeder. This brings capacity by speed, parallel working tools and complete side stability for accurate and efficient row cleaning.
